Available EPS Colors

Multifuser DC2 is a bi-dimensional diffuser panel that is frequently applied to walls or ceilings, providing diffusion and scattering on both vertical and horizontal planes in sound critical spaces. Made from high density quality EPS (Expanded Polystyrene), Multifuser DC is notable not only for its effective performance in solving problems like lack of speech intelligibility or stereo definition, but also for its attractive design that fits perfectly in any kind of room.

Performance
High Performance two dimensional primitive root diffuser
